

MADENMORE

DIGITAL MANUFACTURING

YOU DESIGN. WE MANUFACTURE.

B2B SALES & BUSINESS DEVELOPMENT KIT • 2026
Pune, Maharashtra, India | Snapmaker U1-based production

1. B2B Capability Profile

Madenmore provides digital manufacturing for teams that need physical parts without committing to traditional tooling or large minimum quantities. We manufacture from customer-provided 3D/CAD files, with production decisions based on quantity, application, material, geometry and required lead time.

Who We Serve

- Hardware and product startups needing prototypes and pilot quantities.
- Engineering, R&D; and product-development teams needing functional parts.
- Robotics, automation and electronics teams needing brackets, housings, mounts and enclosures.
- Small manufacturers needing jigs, fixtures, replacement components and low-volume parts.
- Architecture/design teams that already have 3D models and need physical models or components.

What We Manufacture

- Functional prototypes and product-development parts
- Electronics enclosures, housings and covers
- Brackets, mounts, adapters and mechanical components
- Robotics and automation components
- Jigs, fixtures and workshop aids where suitable
- Product mockups and presentation models
- Small-batch components and pilot production
- Multicolor and personalized FDM parts

Materials & Production

Core material options include PLA, PETG and ABS. Other materials can be considered subject to availability, application requirements and validated print settings. Material selection should be based on the actual use case rather than price alone.

Application	Choice	Note
Visual / presentation prototype	PLA	Good for appearance and general prototypes
General functional parts	PETG	Useful balance of strength and practicality
Higher-temperature functional use	ABS	Suitable when application and print conditions allow
Flexible parts	TPU	Subject to availability and validated profile
Outdoor / UV-oriented use	ASA	Subject to availability and validated profile
Engineering materials	PA / PC and others	Project-by-project validation required

Important: material suitability depends on geometry, orientation, environment, loads and print settings. Madenmore does not make safety-critical certification claims.

What We Need From You

- 3D file: STL, 3MF, OBJ or another agreed production-ready format.
- Quantity and required colour(s).
- Preferred material, if known.
- Application / use case and important functional requirements.
- Target dimensions, fit requirements or tolerances where relevant.
- Required delivery date and shipping/collection preference.

How It Works

1 Send file → 2 Printability review → 3 Quote → 4 Approval → 5 Production → 6 QC → 7 Dispatch / collection

Scope Boundary

Madenmore manufactures from customer-provided models. We do not offer general CAD/3D modelling or design-as-a-service. Basic production-oriented checks and manufacturability feedback may be provided where practical.

2. One-Page B2B Sales Flyer

PROTOTYPES → PILOT RUNS → SMALL-BATCH MANUFACTURING

Need physical parts without tooling, long lead times or large minimum quantities? Madenmore manufactures from your existing 3D files.

Ideal For

- Startups & product teams
- Engineering / R&D;
- Robotics & automation
- Electronics hardware
- Small manufacturers
- Prototype & pilot builds

We Can Produce

- Enclosures & housings
- Brackets & mounts
- Functional prototypes
- Jigs & fixtures
- Robotics parts
- Product mockups
- Small batches
- Multicolor FDM parts

Core Materials

PLA • PETG • ABS • Other materials subject to project requirements and validation

Simple Process

SEND FILE → GET QUOTE → APPROVE → WE MANUFACTURE → QC → DISPATCH

3. Quotation & Commercial Rules

Price every B2B job using material + machine time + complexity + finishing/handling + packaging/shipping + applicable taxes, rather than relying only on /gram.

Field	Value / Entry
Quote ID	[MM-B2B-YYYY-###]
Date	[DD/MM/YYYY]
Client	[Company]
Contact	[Name / Role]
File / Part	[File name / description]
Quantity	[Qty]
Material	[Material]
Colour	[Colour]
Lead time	[Working days]
Unit price	 []
Setup / handling	 []
Finishing	 []
Packaging / shipping	 []
Tax	[Applicable tax]
Grand total	 []
Validity	[e.g. 7 days]

Suggested terms: Production starts after approval and required payment/advance as agreed. Quote validity should be stated. Customer is responsible for the correctness and rights to supplied design files. Reprints caused by customer file/design changes are chargeable unless otherwise agreed. Dimensional/fit-critical parts should be discussed before production.

4. Cold Email Sequence

Initial — Subject: Prototype & Small-Batch 3D Manufacturing — Pune

Hello [Name],

I'm reaching out from Madenmore, a Pune-based digital manufacturing studio.

We manufacture functional prototypes, product-development parts and small batches from customer-provided 3D/CAD files. Our production setup is based on the Snapmaker U1, with material options including PLA, PETG and ABS, depending on the application.

If your team occasionally needs 1–100 physical parts without traditional tooling or large minimum quantities, we can review the files and provide a production quote.

Regards,

[Name]

Follow-up 1 — 3–4 days later

Hello [Name],

Just following up on my note about prototype and small-batch manufacturing.

If your team has any upcoming enclosure, bracket, fixture, robotics, product prototype or pilot-batch requirement, feel free to send over the 3D file and quantity. We can review manufacturability and quote the job.

Regards,

[Name] | Madenmore

Follow-up 2 — 7–10 days later

Hello [Name],

One final follow-up from my side.

We work with teams that already have the 3D model but need a reliable way to turn it into a physical prototype or small batch. If this is relevant now or later, I'd be glad to keep Madenmore as a manufacturing option for your team.

Regards,

5. LinkedIn Outreach

Connection: Hi [Name], I work with Madenmore, a Pune-based digital manufacturing studio focused on prototypes and small-batch 3D manufacturing. Would be glad to connect.

After acceptance: Thanks for connecting. We manufacture from customer-provided 3D files—functional prototypes, enclosures, brackets, robotics parts and small batches. If your team ever needs 1–100 pieces without traditional tooling, I'd be happy to quote a part.

Follow-up: Hi [Name], checking in in case you have any upcoming prototype or low-volume manufacturing requirement. You can simply share the 3D file + quantity + deadline and we can take it from there.

6. WhatsApp Sales Script

Hi [Name], this is [Name] from Madenmore, Pune.

We provide prototype and small-batch 3D manufacturing from customer-provided 3D files. We work with PLA, PETG, ABS and other materials depending on the application.

We manufacture parts such as enclosures, brackets, mounts, robotics components, fixtures, prototypes and small batches.

If you have a part requirement, send: 3D file • Quantity • Material/colour preference • Deadline • Application/use case. I can review it and send a quote.

7. Phone Call Script & Qualification

Opening: “Hi, I'm [Name] from Madenmore in Pune. We provide 3D-printed prototype and small-batch manufacturing from customer-provided models. I wanted to quickly understand whether your team ever outsources physical prototype or low-volume parts.”

Ask: Do you build prototypes? Do you have 3D files? Typical quantity? Visual or functional? Material/fit/strength requirements? Deadline? One-time or recurring?

Close: “If you can share one representative file and quantity, I can have the team review it and send you a quote. What's the best WhatsApp/email?”

8. Lead Tracker

Company • Industry • Contact / Role • Phone • Email • LinkedIn • Website • Source • Need • File Received • Quote Sent • Quote Value • Stage • Last Contact • Next Follow-up • Outcome • Repeat Potential.

9. Prototype Enquiry Form

Customer / Company: _____ Contact: _____
3D File: _____ Format: _____ Quantity: _____
Material: _____ Colour: _____ Required date: _____
Use case / functional requirements: _____
Shipping / collection: _____

10. Small-Batch Manufacturing Offer

Position the service as “From prototype to pilot batch.” Quote quantity tiers where practical, retain approved production specifications for repeat orders, and make future reorders faster.

11. First-Order Offer

Recommended tactic: reduce customer risk with a modest first-order incentive or a free initial printability review rather than permanently discounting. Example wording: “For a first prototype order, we can review the file and recommend the most suitable material/process before production.”

12. 30-Day B2B Acquisition Plan

Period	Actions	Target	Output
Days 1–7	Finish capability profile, flyer, quote template, sample box, WhatsApp Business and 3D Printing Labs profile.	25 qualified prospects	Assets ready + list
Days 8–14	Personalized email + LinkedIn outreach; start physical visits.	25–35 contacts	Conversations + enquiries
Days 15–21	Follow up; quote real files quickly; visit industrial/startup clusters.	30+ follow-ups	Quotes + first orders
Days 22–30	Second follow-up cycle; ask buyers for referrals; identify repeat-potential accounts.	20+ active leads	Recurring opportunities

KPIs: qualified prospects, conversations, files received, quotes sent, quote-to-order conversion, average order value, machine-hours sold, contribution per machine-hour, repeat customers and B2B revenue.

13. Prospecting Map — Pune

- Bhosari MIDC / Pimpri-Chinchwad — industrial suppliers, engineering, automation and manufacturing.
- Chakan — automotive and industrial ecosystem.
- Ranjangaon — manufacturing and industrial companies.
- Talawade — technology, engineering and industrial businesses.
- Hinjewadi / Kharadi — product, technology and hardware startups.
- Local colleges/incubators — hardware ventures and prototype requirements.

Search phrases: “industrial automation Pune”, “robotics Pune”, “hardware startup Pune”, “mechanical engineering Pune”, “product development Pune”, “electronics manufacturing Pune”, “automotive supplier Pune”, “prototype development Pune”.

14. Objection Handling

Objection	Response
We already have a 3D printer.	We can act as overflow capacity when your printer is occupied, when you need multiple pieces, or when you need a different material/process.
Your price is high.	We quote around total production cost: material, machine time, complexity, handling and lead time—not only grams.
We only need one piece.	One-off functional prototypes are a core use case; send the file and we'll quote it.
Can you design it?	We manufacture from customer-provided models. We do not offer general CAD/design services, but can flag obvious production issues where practical.
Can you guarantee strength?	Strength depends on material, geometry, orientation, settings and use conditions. We can recommend a process, but safety-critical performance must be validated by the customer.
Can you make 100+?	We can review quantity and geometry and quote a small-batch run. For larger volumes, we'll assess whether FDM remains suitable.

15. Company Visit & Sample Box Strategy

- ABS enclosure / housing — functional production sample.
- PETG bracket or mount — practical mechanical use.
- PLA visual/product sample — appearance.
- TPU sample if validated and available — flexibility.
- Multicolor U1 sample — production capability.
- Mechanical part with visible features — geometry/detail.
- 5–10 identical small parts — small-batch consistency.

30-second pitch: “We are Madenmore, a Pune-based digital manufacturing studio. We manufacture prototypes and small batches from your existing 3D files. If your team needs one part, ten parts or a pilot batch without traditional tooling, send us the model and quantity and we'll quote it.”

Visit sequence: identify the right person → 30-second pitch → show 3 relevant samples → ask one qualification question → leave flyer → collect contact → follow up within 24 hours.

16. Internal Sales Rules

- Never promise a lead time before checking machine availability, geometry and quantity.
- Never promise a material without confirming availability and a reliable print profile.
- Never quote only by weight for complex or multicolor work.
- Record every enquiry and next follow-up date.
- Respond to serious B2B enquiries quickly; speed is part of the product.
- Ask for the use case before recommending material.
- For repeat customers, keep a production record of approved material, colour, orientation and quantity.
- Use the Madenmore consumer identity for products/gifting and the 3D Printing Labs identity for professional manufacturing positioning.

17. Ready-to-Use B2B Positioning

YOU DESIGN. WE MANUFACTURE.

Prototype Manufacturing • Small-Batch Production • Custom FDM Printing

Madenmore is positioned as a digital manufacturing partner for customers who already have the design and need a practical route from digital model to physical part.
